Data Engineering & AI student building RAG systems, LLM agents, and data pipelines

Seeking 6-Month Final Year Internship (French: PFE) | Jan – Jul 2027 | Open to Relocation

EDUCATION

National Engineering Degree – Data & Software Engineering

Sep. 2023 – Jun. 2027

Faculty of Sciences of Bizerte · University of Carthage

Bizerte, Tunisia

- Ranked **5th of 36** in the Data & Software Engineering program

EXPERIENCE

Data & Software Engineering Intern

Jun. 2026 – Aug. 2026

TcodeX Tunis, Tunisia

- Engineered **MediDocs**, a full-stack clinical document extraction platform (Django, PostgreSQL, React) turning medical scans into structured JSON, with session auth and CSRF protection.
- Benchmarked local and API-hosted **vision-language models** (incl. Nemotron-3-Nano-Omni-30B via OpenRouter) on Kaggle, then deployed the best-performing OCR pipeline to production.
- Built an **extraction-quality score** (TF-IDF/cosine similarity, edit distance) to quantify human correction effort.

Software Engineering Intern

Jun. 2025 – Aug. 2025

Générale Tunisienne de l'Informatique (GTI)

Tunis, Tunisia

- Built a credit platform (Angular, Spring Boot, PostgreSQL) for 3 user roles, **cutting processing time by 40%**.
- Designed REST APIs for the credit lifecycle with JUnit tests, and an Angular frontend with RBAC and live status tracking.
- Deployed a local **Ollama** assistant that guides users through credit applications, reducing support-ticket volume.

PROJECTS

Claim-Verify RAG | Python, LangGraph, pgvector, FastAPI, React

Sep. 2026 – Present

- Agentic RAG** that fact-checks its own answer: splits it into atomic claims, then re-verifies each against every source.
- LangGraph verification loop with an independent judge model; **flags claims the sources disagree on**.

Mahara Match – Technical Lead | FastAPI, PostgreSQL, OpenAPI, Docker, CI/CD

Sep. 2026 – Present

- Leading a **4-team, 4-week MVP** that matches job seekers to jobs and training through one shared skill taxonomy.
- Designed a **contract-first** architecture (OpenAPI + mock servers), set up CI and end-to-end tests.

Fuel Station Monitoring System | Python, Kafka, FastAPI, Prophet, LLM Agents, RAG

Apr. 2026

- Team of 3, extended solo: built the backend and Prophet forecasting, then **migrated ingestion to Kafka**.
- An autonomous **LLM agent** acts on critical alerts; a RAG assistant answers questions over past reports.

Global Education Intelligence Platform (BI) | Python, PostgreSQL, Django, GitHub Actions

Feb. 2026

- Designed a **star-schema warehouse** fed by a dependency-aware ETL pipeline, rebuilt nightly on GitHub Actions.
- Served through a Django REST API with React/Streamlit dashboards, containerized with Docker.

TECHNICAL SKILLS

AI & Data: LLM Agents, RAG, LangGraph, pgvector, ChromaDB, Groq, PyTorch, Scikit-learn, NLP, Pandas, NumPy

Data Engineering: ETL Pipelines, Data Warehousing (star schema), Kafka, MLOps (MLflow, DVC), Streamlit

Languages: Python, SQL, Java, Go, JavaScript, C++

Backend & Web: Django, FastAPI, Spring Boot, React, Angular, REST APIs, Flask

Databases & DevOps: PostgreSQL, MongoDB, Docker, GitHub Actions (CI/CD), Git, Linux

LEADERSHIP

Vice President & Social Media Manager – Interact Club North Africa: led 15+ members.

LANGUAGES

Arabic: Native | **French:** Fluent (language of instruction) | **English:** Fluent (full professional proficiency)
